---

*The Architect of the Capitol is responsible for the care and maintenance of the U.S. Capitol and the buildings and grounds of the Capitol complex. The agency implements construction, renovation, conservation, and landscape improvement projects as authorized by the Congress.*

The Architect of the Capitol is charged with operating and maintaining the buildings of the Capitol complex committed to his care by Congress. Permanent authority for the care and maintenance of the Capitol was established by the act of August 15, 1876 (40 U.S.C. 162, 163). The Architect's duties include the mechanical and structural maintenance of the Capitol, the conservation and care of works of art in the building under the Architect's jurisdiction, the upkeep and improvement of the Capitol grounds, and the arrangement of inaugural and other ceremonies held in the building or on the grounds.

In addition to the Capitol, the Architect is responsible for the upkeep of all of the congressional office buildings, the Library of Congress buildings, the U.S. Supreme Court building, the Thurgood Marshall Federal Judiciary Building, the Capitol Power Plant, the Capitol Police headquarters, and the Robert A. Taft Memorial. The Architect performs his duties in connection with

the Senate side of the Capitol and the Senate office buildings subject to the approval of the Senate Committee on Rules and Administration. In matters of general policy in connection with the House office buildings, his activities are subject to the approval and direction of the House Office Building Commission. The Architect is under the direction of the Speaker in matters concerning the House side of the Capitol. He is subject to the oversight of the Committee on House Administration with respect to many administrative matters affecting operations on the House side of the Capitol complex. In addition, the Architect of the Capitol serves as the Acting Director of the U.S. Botanic Garden under the Joint Committee on the Library.

The position of Architect of the Capitol was historically filled by Presidential appointment for an indefinite term. Legislation enacted in 1989 provides that the Architect is to be appointed for a term of 10 years by the President, with the advice and consent

of the Senate, from a list of three candidates recommended by a congressional commission. Upon confirmation by the Senate, the Architect becomes an official of the legislative branch as an officer and agent of Congress. He is eligible for reappointment after completion of his term.

Recent and ongoing projects carried out by the Architect of the Capitol include construction of the Capitol Visitor Center; conservation of murals and decorative paintings in the Capitol;

improvement of speech-reinforcement, electrical, and fire-protection systems in the Capitol and congressional office buildings; work on security improvements within the Capitol complex; renovation, restoration, and modification of the interiors and exteriors of the Thomas Jefferson and John Adams Buildings of the Library of Congress and provision of off-site book storage facilities for the Library; and facility management of the Thurgood Marshall Federal Judiciary Building.

HOLLY H. SHIMIZU

*The United States Botanic Garden informs visitors about the importance and value of plants to the well-being of humankind and earth's ecosystems.*

The United States Botanic Garden (USBG) is one of the oldest botanic gardens in North America. The Garden highlights the diversity of plants worldwide, as well as their aesthetic, cultural, economic, therapeutic, and ecological significance. The USBG encourages plant appreciation and the growth of botanical knowledge through artistic plant displays, exhibits, educational programs, and curation of a large collection of plants. It fosters plant conservation by serving as a repository for endangered species. Uniquely situated at the heart of the U.S. Government, the Garden seeks to promote the exchange of ideas and information relevant to its mission

among national and international visitors and policymakers.

The Garden's collections include orchids, epiphytes, bromeliads, carnivorous plants, ferns, cycads, cacti, succulents, medicinal plants, rare and endangered plants, and plants valued as sources of food, beverages, fibers, cosmetics, and industrial products.

The U.S. Botanic Garden's facilities include the Conservatory, the National Garden, Bartholdi Park, an administration building, and an off-site production facility. The Conservatory, one of the largest structures of its kind in this country, reopened on December 11, 2001, after undergoing major renovation that required more than 4 years to complete. In addition to upgraded
